

Living and Studying in London

Lots of great cities are proud of their history, their dynamism, and their multi-cultural happiness, but London is the greatest of them all. 2000 years of history has given our city an immense range of historic buildings, monuments, museums, and galleries. Greater London is bigger than Paris plus Rome plus Vienna put together, yet it contains more green parks, public open spaces, and wildlife than most other capitals. London is a top world centre for financial services and banking, as well as a creative powerhouse for the arts and media.

The United Kingdom, with London at its heart, pioneered many things that the whole world now takes for granted, such as computers, universal health care, railways, many sports, the theory of evolution, freedom of speech, river tunnels, antibiotics, and of course the English language. London was the first city to confront, and start to overcome many urban problems: smog in the air, sewage in the river, too many cars on the road.

Academic Excellence

London's universities are among the best in the world, providing top-quality courses at vocational, undergraduate, postgraduate, professional, or specialist levels. Surrounding and feeding those top educational institutions are a host of other resources: libraries, museums, learned societies, and small colleges.

Anglian College is one of those feeder organisations, a small college dedicated to one simple goal: bringing the rich banquet of London's opportunities within the reach of students who are not rich. Our location provides just the right balance of easy access to big city opportunities (notably part-time jobs and spare time fun) coupled with affordable housing and good transport.
